

Yuval *Gabay*

Law student. Graphic designer. Self-taught builder.

I built both apps below for my own work, and I use them every day.

01 - ABOUT ME

Who I am

I am 23. I am in my first year of law school, and next to my studies I build AI automations, apps and software.

I am not a programmer. I don't write code from scratch. I describe the system I need and build it with AI tools. Both apps below were made that way.

Before college I served **2 years and 8 months in the Israeli Air Force** as a non-destructive testing (NDT) technician, finding cracks inside aircraft parts that nobody can see from the outside. In that job, "almost right" means wrong. I still work that way.

DESIGN WORK, IN TOTAL

NOTE I built both apps alone, while studying. Neither was a school project.

02 - WHAT I BUILT

Two apps

01

Lead OS

A Facebook agent that posts for me and finds me customers

- It posts my content to Facebook groups on a schedule. I don't open Facebook to do it.
- It also reads those groups and looks for people asking for what I sell. When it finds one, it sends the lead to my phone straight away.
- It has run by itself, every day, since July 2026.

Automation

Scheduling

Phone alerts

02

Handover

Making apartment handover inspections faster

- When a developer hands a new apartment to the buyer, someone walks through it and writes down every defect. Here it is still done on paper, and then typed up again later.
- My app takes the inspector through the apartment room by room, records each defect with a photo, and produces the report that the buyer and the developer sign.
- The whole point is speed: finish the report on site, instead of doing the work twice.
- Fast enough to use standing in an empty room, with one hand.

In development

Claude

Mobile app

HOW I WORK Build it. Use it myself. Let it break. Fix the reason, not the symptom.

03 - BACKGROUND

Studies, work and service

Nov 2025 – now

Law student, first year
Sapir Academic College, Israel
Heading toward contract law and the rules around technology.

7 years, on and off

Freelance graphic designer
Independent — brands, campaigns, social content
Real clients, real briefs, real deadlines. Seven years of design work in total, around school, the army and college.

Dec 2021 – Aug 2024

NDT technician — non-destructive testing
Israeli Air Force — 2 years 8 months
I checked aircraft parts for cracks and faults hidden inside the material, without damaging the part. I worked mainly with **eddy current testing**, **magnetic particle testing** and **dye penetrant testing**, and to a lesser extent with **ultrasonic testing**. Every check written down. A missed fault is not an option.

04 – SKILLS

What I work with

I BUILD WITH

Claude ChatGPT Gemini and many others

DESIGN

Photoshop Canva AI image tools AI video tools Hyperframes CapCut
Sony Vegas and many others

INTERESTED IN

Contract law Law & technology AI Startups

LANGUAGES

Hebrew Native
English Excellent

HONESTLY I am not a developer. I am someone who needed an automation to exist, and did not accept "I don't know how" as a reason it couldn't.

05 – WHY I FIT

Why I fit BIPA

I start things myself
I built two apps nobody asked me to build, while studying law and working as a designer. I find the problem first, then I build the answer.
I solve problems I don't know how to solve yet
I had no training in software. I built it anyway. Starting from not knowing is normal for me, not scary.
I work in small steps
I build a small version, use it for real, see what breaks, fix it, repeat. It is the only way one person gets anything finished.
I work well with people who are not like me
Air Force service in mixed technical teams under pressure. Design clients who rarely want what they first asked for.
What I bring to a team
I look at a solution from the legal side too — contracts, responsibility, data, the new AI rules. For a challenge from a Bavarian company, those questions come before launch, not after.

FIELDS I'D CHOOSE Law, contracts, corporations, startups, AI, technology.

06 – AVAILABILITY

For BIPA 2026

● **AVAILABLE** for every phase of the program.
